ACADEMIC PROJECTS

This document presents a selection of academic and personal projects related to High-Performance Computing (HPC), Artificial Intelligence, cloud computing, software engineering and distributed systems.

University of Perpignan Via Domitia (UPVD)

📅 Since 09/2024

📍 Perpignan, France

- Evaluation of LLMs for scientific Fortran code generation, including the construction of an HPC-oriented dataset and supervised fine-tuning of models. *..Ongoing..*
- Deployment of a Kubernetes cluster and an LSTM MLOps pipeline with HPC optimization techniques 🖱️ [Github](#)
- Scientific synthesis on stochastic rounding and numerical stability (research paper analysis) 🖱️ [Github](#)
- ML-based traffic prediction study for 5G core network scalability 🖱️ [Github](#)
- CNN pipeline from scratch for traffic sign recognition (GTSRB) 🖱️ [Github](#)
- Performance analysis of code computing zeros on the critical line of the Riemann Zeta function 🖱️ [Github](#)
- Analysis and debugging of a C project structuring a numerical library based on BLAS 🖱️ [Github](#)
- Loop optimization in a matrix multiplication algorithm 🖱️ [Github](#)
- Performance optimization through vectorization 🖱️ [Github](#)

University Akli Mohand Oulhadj Bouira

📅 09/2016 – 09/2022

📍 Bouira, Algeria

- NS-3 project
- Mini compiler implemented in C
- Embedded system project: *SMART ROOM*, simulating an intelligent room using Arduino
- Linear programming project using Python
